

Summary

Driven data science enthusiast with a strong foundation in statistics. Actively following advancements in Generative AI and committed to building intelligent, impactful solutions through continuous learning and practical applications.

Experience

Data Scientist Intern Certificate Goldbergmed gmbH	Remote, Germany June2024 – June 2025
Revenue and Profitability Analysis Conducted revenue analysis by country and city using Python and Tableau, identifying high-performing regions and enabling data-driven business decisions. Utilized A/B test and Effect Size delivering clear data insights to stakeholders and supporting impactful business strategies. Product and Market Basket Analysis Developed and implemented basket analysis to identify purchasing patterns, enabling targeted cross-selling and upselling strategies. Healthcare Data Analysis – Modeling Developed predictive Machine Learning models to estimate the likelihood of stomach cancer, achieving %80 accuracy in predictions. Computer Vision Projects Designed a Computer Vision-based system to classify and evaluate weld quality in medical devices, significantly reducing manual inspection time by 30% and enhancing overall production efficiency. Chatbot Development Developed question-answer chatbot based on medical device to provide detailed information about the company and its medical products, enhancing customer engagement and support efficiency. Implemented Natural Language Processing (NLP) techniques to enable accurate understanding of user queries and deliver relevant information. Product Breakdown Structures Developed comprehensive Product Trees to support engineering design and production planning, improving traceability of components and alignment across departments. Product Failure Prediction Analyzed and developed a predictive model with scraped data to estimate the products failure, achieving %83 accuracy.	

EDUCATION

Hacettepe University Bachelor of Science – Statistics; CGPA: 3.03/4.00	Ankara, Turkey October 2022- June 2026(Expected)
Relational Coursework: Data Mining, Intelligence Optimization Techniques, Database Management.	

PROJECTS

Medical Chatbot LINK - Developed a Retrieval-Augmented Generation (RAG) system for medical knowledge queries. - Implemented semantic chunking and multi-vector retrieval with Pinecone for context-aware medical responses. - Built a Flask-based backend and integrated Gemini LLM with optimized prompt engineering for reliable medical outputs.
LLM Powered Question & Answer Generator LINK - Engineered AI Agent using LangChain, locally deployed Llama3 (Ollama) to autonomously generate structured interview questions, focusing on contextual accuracy and data grounding essential for technical analysis. - Implemented full-stack solution featuring FAISS for efficient vector retrieval and deployed interfaces via FastAPI and Streamlit.
Semantic Book Recommender System LINK Integrated NLP techniques including Text Classification Model for Emotion Aware Filtering and genre refinement, delivering a highly personalized and interactive user experience via a Gradio Web Interface
Credit Score Prediction LINK Developed artificial neural network (ANN) classification model for credit risk assessment, mitigating severe class imbalance via SMOTE implementation rigorous feature engineering.

SKILLS

- Languages:** Python, SQL, R
- Frameworks:** Pandas, Numpy, Scikit-Learn, Matplotlib, Seaborn, Scipy, Tensorflow, Pytorch, Streamlit, Langchain
- Tools:** Power BI, Tableau, PostgreSQL, SPSS, Minitab, Git/Github, ClickUp
- English:** Intermediate
